

## Practical No. 8

**Aim:** Write an Android program to demonstrate the concept of Widgets in Flutter.

**main.dart**

```
import 'package:flutter/material.dart';

void main() {
  runApp(const MyApp());
}

class MyApp extends StatelessWidget {
  const MyApp({Key? key}) : super(key: key);

  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      debugShowCheckedModeBanner: false,
      home: Scaffold(
        appBar: AppBar(
          title: const Text("Login"),
        ),
        body: Column(
          mainAxisAlignment: MainAxisAlignment.center,
          children: [
            const Text(
              'Flutter Practical',
              style: TextStyle(fontWeight: FontWeight.bold, fontSize: 30),
            ),
            const SizedBox(
              height: 30,
            ),
            const TextField(
              decoration: InputDecoration(hintText: 'Enter Your Name'),
            ),
            const SizedBox(
              height: 30,
            ),
            ElevatedButton(
              onPressed: () {
                // Login logic
              },
              child: const Text('Login', style: TextStyle(fontSize: 30)),
            ),
            const SizedBox(
              height: 30,
            ),
          ],
        ),
      ),
    );
  }
}
```

```
const Image(  
  image:  
NetworkImage('https://staticg.sportskeeda.com/editor/2022/11/a402f-  
16694231050443-1920.jpg')  
  ),  
  1,  
),  
),  
);  
}  
}
```

Output
